Subject: Removal of Underground Storage Tank,  
Permit Number 345-91 ABN

Dear Mr. Tanke:

Arrow Gear Company recently successfully filled one underground storage tank and replaced it with above ground tanks to comply with all federal and state underground storage tank regulations.

We currently have a second underground storage tank in our heat treat department which is scheduled for closure. However, with the current backlog in our heat treat department, we can not afford any extended length shut down for this department. We feel that the tank is in good sound condition since it contains non-corrosive, non-hazardous quench oil only.

Therefore, we are asking your office to grant us a six month extension on our permit for closure of the remaining underground storage tank until a more opportune time to shut down our heat treat department arises and further arrangements can be made. If we close now, we may have to put people on extended lay-off in the heat treat and other departments, which, in these tough economic times, is a difficult choice.

We are committed to the closure of our underground storage tanks and will comply with these regulations.

Sincerely,  
ARROW GEAR COMPANY

Re: Corrective Action Report, Corrective Action Form

Dear Mike:

Enclosed please find two copies of the Corrective Action Report and two copies of the Corrective Action Form. This report has been submitted to the IEPA in response to your petroleum product release from an underground storage tank. As I had discussed in previous conversations, the cleanup objective for Carcinogenic PNA's has not been met. However, the Report requests that site specific objectives for these compounds be granted by IEPA. I do not feel that this will be a problem. The IEPA will forward another 45-Day Report form to you. This form must be again filled out and request the aforementioned site specific objectives for the facility. When you receive this form, please forward to me and I will provide the information.

The IEPA does not act very quickly on these requests. It may take up to one year before the variances are granted. In the interim, I would proceed with the plan to install the new furnace on the UST site.

If there are any questions regarding this information, please do not hesitate to contact me.

Sincerely,

Dana S. Rose  
President
